

— THE ENTERPRISE INTELLIGENCE PLATFORM

Operationalize enterprise intelligence.

The AI-native operating system for the modern enterprise — orchestrating autonomous agents, enterprise knowledge, and predictive intelligence across the systems you already run.

Intelligence is trapped inside the systems you own.

Fragmented systems

Context scattered across ERP, CRM, ITSM, and legacy tools that don't talk.

Siloed, dark data

80%+ of enterprise knowledge is unstructured and undiscoverable.

Manual dependency chains

Work moves at the speed of human hand-offs.

Reactive operations

Issues surface after impact; no real-time line of sight.

No orchestration layer

Copilots answer; nothing coordinates toward an outcome.

Pilot purgatory

Experiments stall before production for lack of trust.

An intelligence layer that sits inside your enterprise.

Interaction

Chat, copilots, and embedded surfaces in the tools teams already use.

Agent Orchestration

Specialized agents plan, reason, and coordinate toward business outcomes.

Knowledge & Reasoning

Retrieval-augmented enterprise knowledge grounded in your data.

Integration & Observability

Secure connectors + full audit trails and operational telemetry.

Enterprise Systems

Your systems of record stay the source of truth.

— CORE PLATFORM PRODUCTS

**Three engines. One intelligent
enterprise.**
Agent Studio · Knowledge AI · PredictIQ

Build, deploy & govern autonomous agents.

Design multi-agent workflows for complex business logic — run them in production with the oversight enterprises require.

- **Orchestrate** — agents that plan, decompose tasks, and coordinate across systems
- **Govern** — built-in audit trails, guardrails, and human-in-the-loop control
- **Deploy** — seamless integration with existing infrastructure and security

Turn enterprise knowledge into a single source of truth.

A retrieval-augmented intelligence layer that connects proprietary data and answers grounded, citable questions.

- **Advanced RAG** — context-aware answers grounded in your own data, with sources
- **Semantic search** — surface institutional knowledge buried in unstructured content
- **Secure & scalable** — strict access controls, data privacy, robust governance

Move from reporting the past to shaping the future.

A predictive intelligence engine that turns historical data into forecasts, prescriptive recommendations, and decision support.

- **Predictive analytics** — accurate forecasts using advanced ML models
- **Decision intelligence** — prescriptive recommendations for complex scenarios
- **Real-time integration** — live enterprise data on one decision surface

Enterprise-grade AI capabilities, natively integrated.

Contextual reasoning

■
Operational automation

Real outcomes across the operation.

IT & AI Operations

Autonomous triage, root-cause reasoning, remediation.

Enterprise Search

Instant grounded answers from every system.

Incident Intelligence

Correlate signals, predict impact, resolve faster.

Workflow Automation

Replace manual chains with orchestrated agents.

Executive Intelligence

Boardroom-ready real-time and predictive insight.

Enterprise Modernization

Embed AI into legacy operations, no rip-out.

— BUSINESS IMPACT

Measurable value, boardroom-ready.

40%

Faster operational cycle &
resolution

60%

Less manual, repetitive effort

3x

Faster decision velocity

10x

Scalability without headcount

Illustrative targets for executive discussion, not guaranteed results.

Beyond copilots. An operating layer.

	Generic AI copilots	Envision AI
Scope	Assistance inside one app	Orchestration across the enterprise
Knowledge	General model knowledge	Grounded in your proprietary data
Action	Suggests; you execute	Agents that execute, with oversight
Integration	Point integrations	Enterprise fabric over your systems
Governance	Limited visibility	Audit trails & human-in-the-loop

Implementable today. Autonomous tomorrow.

Phase 01

Augment

- AI copilots in core tools
- Enterprise integrations
- Operational visibility

Phase 02

Orchestrate

- Workflow intelligence
- Multi-agent orchestration
- Process automation

Phase 03

Autonomize

- Predictive operations
- Autonomous workflows
- AI-native operating model

Built for the standards enterprises demand.

Security

Zero-trust, RBAC, encryption

Governance

Policy, audit, human-in-loop

Compliance

GDPR / HIPAA / SOC 2 readiness

Data sovereignty

Regional residency & control

Integrations

ERP, CRM, ITSM, warehouses

Observability

Telemetry across agents

Cloud-native

Public / private / hybrid

Deployment models

Cloud, hybrid, on-premise

— THE FUTURE OF ENTERPRISE OPERATIONS

From enterprise systems to enterprise intelligence.
